PROFILE SUMMARY

Software Engineer with experience across AI/ML solution development, Retrieval-Augmented Generation (RAG) systems, and software quality assurance. Skilled in Python-based development, data-driven model building, and automated/manual testing, with a solid grounding in end-to-end application workflows and API validation. Known for strong attention to detail, clear communication, and effective collaboration within cross-functional teams. Looking to bring a versatile technical and QA foundation to enterprise-scale projects and on-site engagements.

CORE COMPETENCIES

Python Development • *RAG & AI/ML Solutions* • *Manual & Automation Testing (Appium)* • *API Testing* • *OCR & Document Processing* • *Vector Databases (ChromaDB, PostgreSQL/Pgvector)* • *Qualcomm SDK* • *Microsoft Office Suite (Excel, Word, PPT)* • *Team Collaboration* • *Time Management*

PROFESSIONAL EXPERIENCE

Developer – R&D Team | Ecrio Inc. *Jul 2025 – Present*

- Develop Retrieval-Augmented Generation (RAG) solutions for industrial use cases, enabling intelligent retrieval of information related to industrial equipment.
- Build AI/ML solutions in Python, including anomaly detection models for predictive use cases.
- Work with Qualcomm SDK technologies to support AI/ML and broader software development initiatives.
- Contribute to the design and exploration of AI-driven solutions for real-world industrial applications, collaborating closely with cross-functional teams.

QA Intern | Ecrio Inc. *Sep 2024 – Jul 2025*

- Performed manual testing of applications to validate functionality, usability, and overall product quality.
- Built and executed UI automation test suites using Appium and Python, improving test coverage and reducing repetitive manual effort.
- Conducted API testing to verify functionality and expected application behavior.
- Executed structured test cases and tracked defects end-to-end through the testing lifecycle, coordinating with development teams on resolution.

KEY PROJECTS

Industrial Q&A RAG System

- Built a Retrieval-Augmented Generation (RAG) system to answer queries on industrial equipment and technical information.
- Implemented document retrieval and context-based response generation to deliver relevant, accurate information for industrial use cases.

PDF Parsing & OCR Pipeline

- Developed a document-processing pipeline converting incoming PDFs into images and extracting text via OCR.
- Processed and validated extracted data to support downstream AI/ML applications.

EDUCATION

M.Sc. Computer Science (Data Science) *Aug 2020 – May 2025*

Mother Teresa Women's University, Kodaikanal, India — CGPA: 8.6/10, Gold Medalist (Top Performer of the Batch)

CERTIFICATIONS

MongoDB (ICT) | Artificial Intelligence (NoviTech) | MERN Stack (Ecrio Inc.)
